Founded in 1993, Sering provides engineering and architectural consulting services for planning, design and construction to both public and private sector Clients, nationally and internationally, in a timely, cost effective and innovative manner while providing quality and responsive services by a highly qualified and experienced staff. Sering provides a broad spectrum of professional consulting services, allowing us to serve our Clients during each phase of a project, including advance/preliminary planning services, design and construction oversight.

Sering has experience in:
- Civil Engineering Design Services including commercial, industrial, residential and land development, water supply and distribution, hydrology, water quality, transportation, structures and public works
- Planning Services including infrastructure, water supply and distribution, urban and regional planning, urban design, landscape architecture, land development, master planning development, resource, environmental and transportation planning.

Sering is leader in the field of hydraulic engineering and provides a full range of professional services from analysis, concept throughout design, and construction support services.

Sering has proven experience in developing practical and cost-effective solutions to meet hydraulic design challenges. It is an innovation of creative ideas and concepts, and provides technical excellence in:
- Water supply and sewer master planning
- Computer modelling
- Highway and freeway drainage studies and analyses
- Sewer collection system design
- Water supply system design
- River basin modelling and planning
- Design of flood control structures
- Structural design
- Water reclamation facilities

Sering utilizes a multi-disciplined team approach and states-of-the-art computer technology to serve the firms’ Clients.
